12	Referral program	Your link, your commission, payouts
13	Troubleshooting & FAQ	Quick answers
14	Support	How to reach a person

Tip. This guide describes 11Charts as of September 2026. The app updates itself: click the version number at the bottom of the dashboard sidebar at any time to read what changed, or to take the guided tour again.

CHAPTER 01

Welcome to 11Charts

11Charts is a backtesting desk that runs in your browser. You pick a pair and a period from real market history, replay it candle by candle, take trades exactly as you would live, and keep the record — every trade, every note, every drawing — attached to your account.

What makes it different

- **No lookahead.** The chart only ever shows what had happened by the moment you are standing in. You cannot accidentally read the future.
- **Real data, every timeframe.** Minute data is downloaded once for your session; every other timeframe — 5m, 30m, 4h, daily — is built from it in your browser, so switching is instant.
- **A complete toolkit on every plan.** 68 drawing tools, the full indicator library including the ICT and smart-money suites, a trade journal and performance analytics. Plans change how much you can hold open at once, never which tools you may use.
- **Nothing to install.** Open 11charts.com/app in any current browser on Windows, macOS, Linux, or a tablet.

What you need

A browser	Chrome, Edge, Firefox or Safari — the current version. Chrome gives the smoothest replay.
A Google account	Sign-in is with Google only. It is what keeps your work attached to you rather than to one browser.
A connection	Needed when you open a session (price history downloads) and to keep your account verified. A stable connection matters more than a fast one.
A screen	A laptop or desktop is best. Tablets are fully supported — pan and pinch to zoom, tap to place a drawing, drag its handles by finger, and two-finger tap for the right-click menu. Phones work, but the desk is cramped there.

The areas of the app

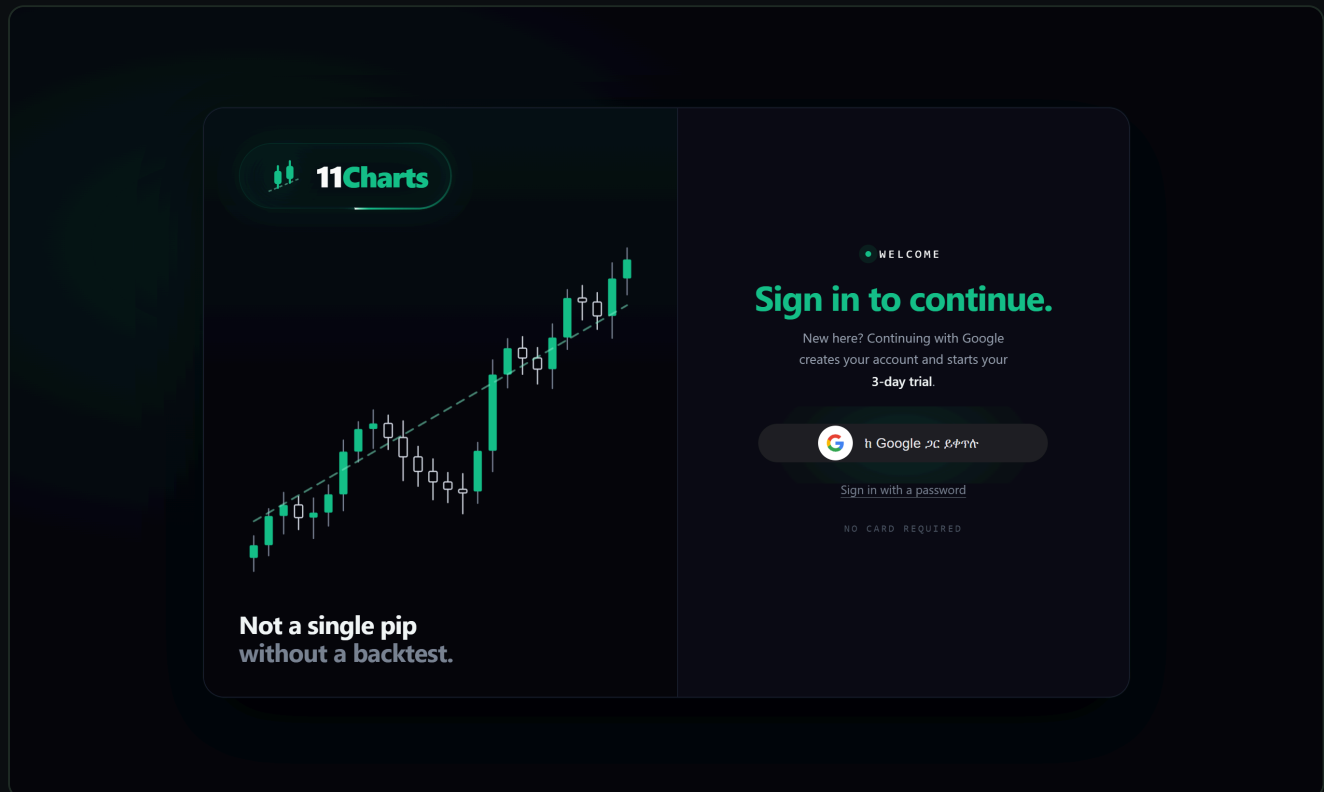

AREA	WHAT IT IS FOR
Backtesting	Where you practise: your sessions, and the chart you replay them on.
Journal	Every trade you have taken across all sessions, with the setup and the thinking you captured on the ticket.
Analytics	Your results turned into a read on your edge: win rate, R multiples, streaks, best hours and days, a performance calendar.
Referrals	Your referral link, what it has earned, and who signed up through it.

CHAPTER 02

Getting started

Sign in

- 1 Go to 11charts.com and click **Open the app**, or open 11charts.com/app directly.
- 2 Click **Continue with Google** and choose the Google account you want your work attached to.
- 3 The first time, you may be asked for your country and phone number — this is what lets support reach you and what your referral payouts are sent to.

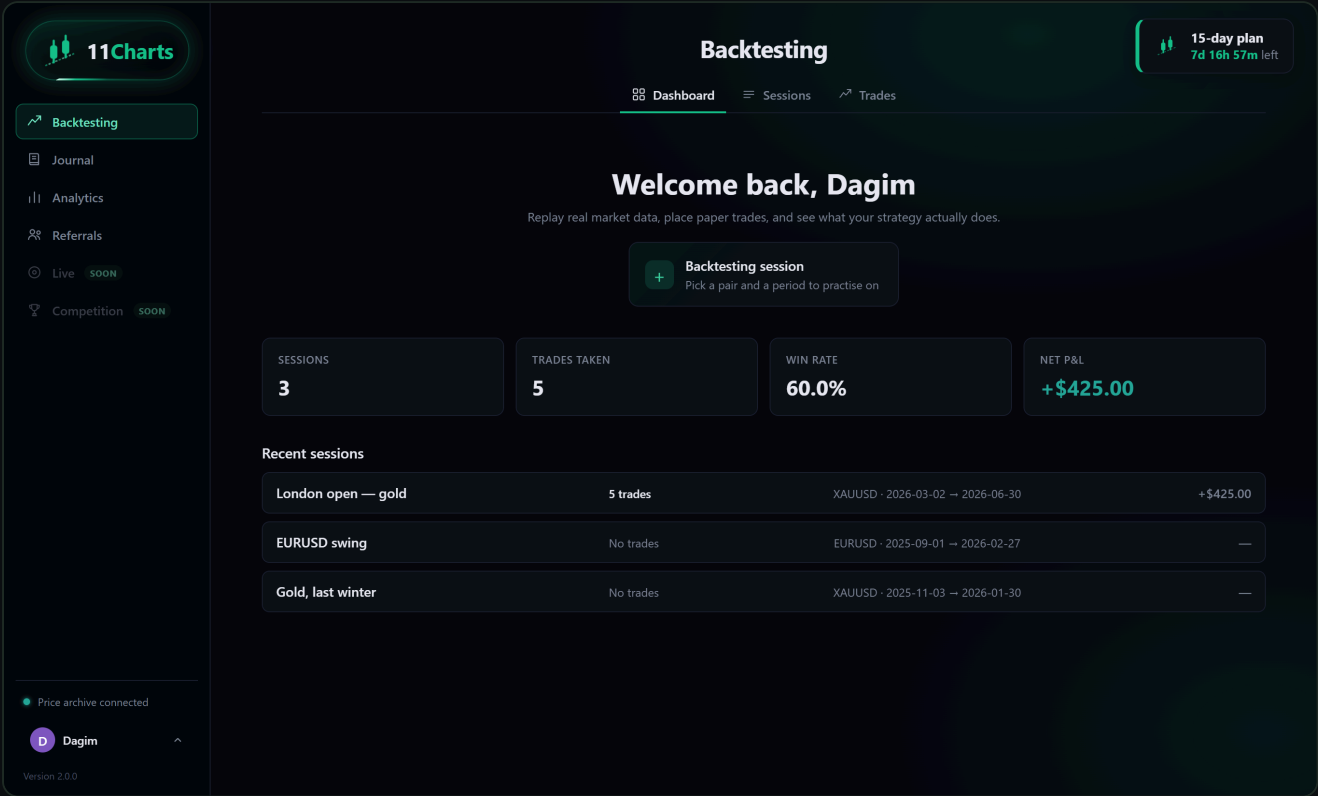

The sign-in gate. One Google account, one 11Charts account. Your sessions, trades, journal and drawings follow it to any machine.

Your free trial

Every new account starts with a **3-day free trial**: two backtesting sessions with up to six months of history each, unlimited indicators, every drawing tool and full journal access. The one thing the trial leaves out is the Analytics area. When the three days end, the app stops opening sessions until a plan is active — nothing is lost; everything is waiting for you.

The dashboard

After sign-in you land on the Backtesting dashboard: a welcome, a button to start a session, four numbers that sum up your account, and your most recent sessions.

The dashboard. Left: the areas of the app and your account. Top right: your plan and how long it has left — click it to see plans or renew. Centre: the Dashboard / Sessions / Trades tabs.

Sessions	How many sessions are on your account.
Trades taken	Every position you have opened, across all sessions.
Win rate	Closed trades that ended in profit, as a share of all closed trades.
Net P&L	Realised profit and loss, summed over every session, in account currency.

The guided tour. The first time you open the dashboard and the first time you open a chart, a short tour points out where everything lives. You can take it again any time from the version number at the bottom of the sidebar.

CHAPTER 03

Sessions

A session is one practice run: a pair, a starting balance and a period of history. Everything you draw and every trade you take belongs to that session, and it saves itself as you go.

Create a session

- 1 Open the **Sessions** tab and use the **New session** form on the right.
- 2 Give it a **name** (optional — "London open — gold" is easier to find later than "XAUUSD · 2026-03-02").
- 3 Pick the **pair**. Start typing and choose from the list; the form then shows the dates our archive holds for it.
- 4 Set the **account balance** you want to trade with.
- 5 Choose a **start date** and an **end date**. The calendar greys out days outside the archive and days beyond what your plan allows.
- 6 Click **Start backtesting**. The opening screen downloads the minute history for your period — a few seconds for a month, a couple of minutes for a year — and the chart opens at your start date.

The screenshot displays the 11Charts Backtesting interface. On the left is a sidebar with navigation links: Backtesting (active), Journal, Analytics, Referrals, Live (SOON), and Competition (SOON). The main area is titled 'Backtesting' and has tabs for Dashboard, Sessions (active), and Trades. A '15-day plan' meter shows 7d 16h 57m left. Below the tabs, there's a 'Your sessions' section with filters: All time (selected), Past 5 days, Past 10 days, Past 30 days, Past 90 days, and Custom. It lists three sessions: 'London open — gold' (XAUUSD · 2026-03-02 → 2026-06-30 · \$10,000, 0%), 'EURUSD swing' (EURUSD · 2025-09-01 → 2026-02-27 · \$5,000, 21%), and 'Gold, last winter' (XAUUSD · 2025-11-03 → 2026-01-30 · \$10,000, 51%). To the right is the 'New session' form with fields for NAME (e.g. London open — gold), PAIR (Search pairs — e.g. XAUUSD), ACCOUNT BALANCE (\$) (10000), START DATE (2 Jun 2026), and END DATE (2 Sep 2026). A 'Start backtesting' button is at the bottom. A footer shows 'Price archive connected', 'Dagim' profile, and 'Version 2.0.0'.

The Sessions tab. Left: your sessions, with the plan meter above them. Right: the New session form.

The allowance strip

Above your session list, one strip says how many more sessions you can create: **sessions left of sessions included**, added up over every plan you have running, and when the next of them ends. **Plans** opens the breakdown — each plan's window, what is left on it, and the longest period a single session on it may cover. The strip turns quiet when the allowance is spent.

How sessions are counted. Each plan includes a number of sessions *created* during its period — 4 on the 15-day plan, 8 on Monthly. Creating a session spends one, from whichever running plan ends soonest, so nothing is left to expire unused; the form says which plan it will spend before you press Start. Deleting a session does **not** give it back. Buying another plan adds its sessions to the pool.

Resume a session

Click a session to open its review page — the period, the balance, its trades so far — then **Continue session**. You return exactly where you left off: the bar you had reached, your timeframe, your layout, your drawings and your open positions.

Find sessions by date

The pills above the list filter your sessions by when you last worked on them: **All time**, **Past 5 / 10 / 30 / 90 days**, or **Custom** for any from/to range. The choice is remembered.

Sessions outlive their plan

The list holds every session you have ever created, whichever plan it was created on. A plan governs how many sessions you may *create*; opening one only asks that some plan be running. Sessions from a plan that has since ended open like any other for as long as you have a plan active.

Delete a session

The ✕ at the right of a session deletes it. Because deleting is permanent and does not return the session to your plan's allowance, the app stops you first and says exactly what will happen.

Deleting a session. Two facts, before anything happens.

Before you delete. The session's trades, journal entries and drawings are removed for good. There is no undo, and it will not be in your history. If you only want it out of the way, use the date filter instead.

CHAPTER 04

The chart

The chart view. Top bar: pair, timeframes, chart style, indicators, undo/redo, back to dashboard, layouts, saved layouts, settings, fullscreen, screenshot, grid, theme. Left: drawing tools. Floating: the drawing favourites bar and the replay bar. Right: your drawings, with a chevron to fold the panel away. Bottom: your positions.

Timeframes

The top bar shows your favourite timeframes; the arrow beside them opens every timeframe from **1 minute to 1 month** (1m, 2m, 3m, 4m, 5m, 6m, 10m, 12m, 15m, 20m, 30m, 45m, 1h, 2h, 3h, 4h, 6h, 8h, 12h, 1D, 1W, 1M). Star the ones you use to pin them to the bar. Every timeframe is built from your session's minute data, so switching is instant and nothing ahead of your replay position is ever shown.

Chart styles

Candles, hollow candles, bars, line, line with markers, step line, area, baseline and columns. Switch from the style button in the top bar; your zoom and position are kept.

Replay

The bars stop at your session time and move forward only when you tell them to. The replay bar floats over the chart — drag its handle to put it wherever it is out of your way.

► Play / pause	Runs the session forward at the chosen speed.
+1m	Advances exactly one minute — even on a 4h chart, so you can watch a candle form.
Candle	Advances one full candle of the timeframe you are on.
Speed	1×, 3×, 10×, 30× or 60× — minutes of market time per second of yours.
Jump	Click the jump button, then click a bar on the chart: a line snaps to the boundary of that candle and the replay moves there — back, or forward.

A small **countdown** under the live price on the price axis shows how long is left in the forming candle at the current speed. It is on by default and switches off in Settings (**Countdown to bar close**); the finest timeframe has none.

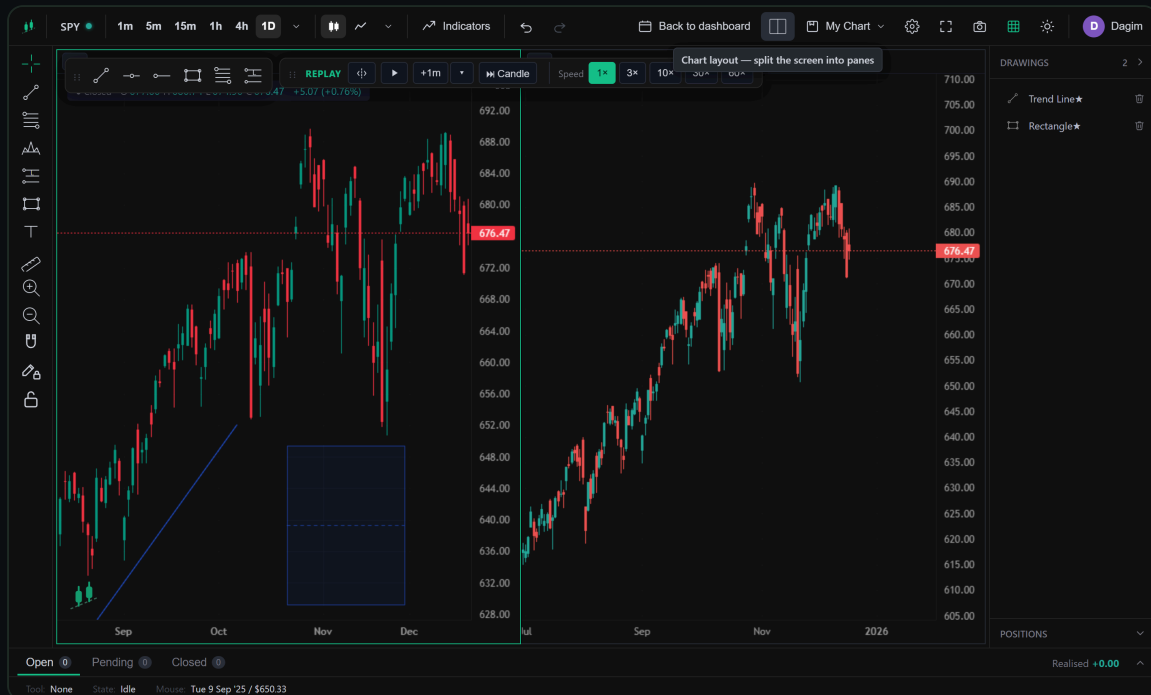

Replay in progress. The dashed line marks the moment you are standing in; the space to its right is empty by design.

The space to the right

Past the last candle the chart keeps going — a runway you can scroll into and draw on. Levels, targets and projections placed there stay exactly where you put them as the replay catches up.

Split the screen

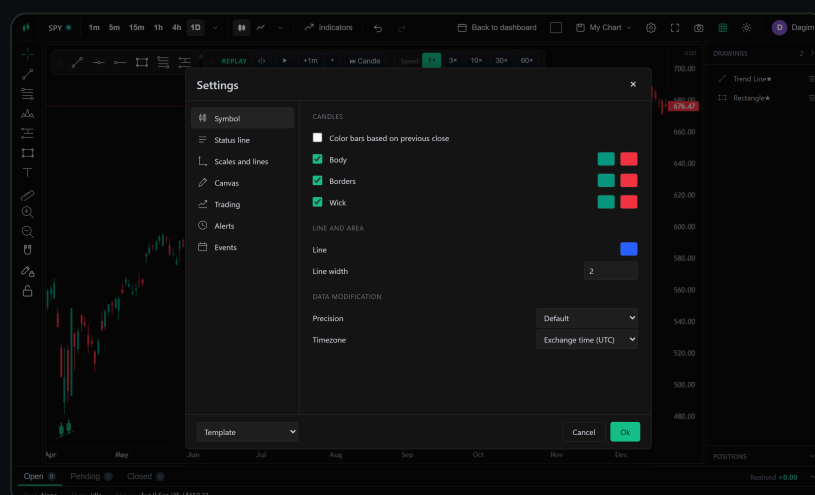

The layout button opens grids of up to **four panes**, each on its own timeframe of the same session — the daily beside the 15-minute, say. Drawings can be mirrored across panes. The layout is saved with the session.

Two panes on one session — the same pair on two timeframes, replaying together.

Chart settings

The gear opens Settings: candle colours, borders and wicks; the status line; scales and lines; the canvas (background, grid, crosshair, margins); trading overlays; alerts; events. The **Template** menu at the bottom saves a whole set of settings under a name, loads one, or restores the defaults.

Settings. Any colour swatch opens the 11Charts colour picker.

Chart looks empty? Choose **Template** → **Default** in Settings, or simply reopen the session. See [Troubleshooting](#).

Saved layouts — "My Chart"

The **My Chart** menu saves the chart as you have it — style, timeframe, indicators, panes — under a name, so you can bring the same desk to a new session in one click.

Theme, screenshot, fullscreen

- **Theme** — the sun/moon button switches the whole app between dark and light.
- **Screenshot** — the camera button saves the chart as an image, with your drawings, ready to share.
- **Fullscreen** — removes the browser around the chart. `Esc` brings it back.

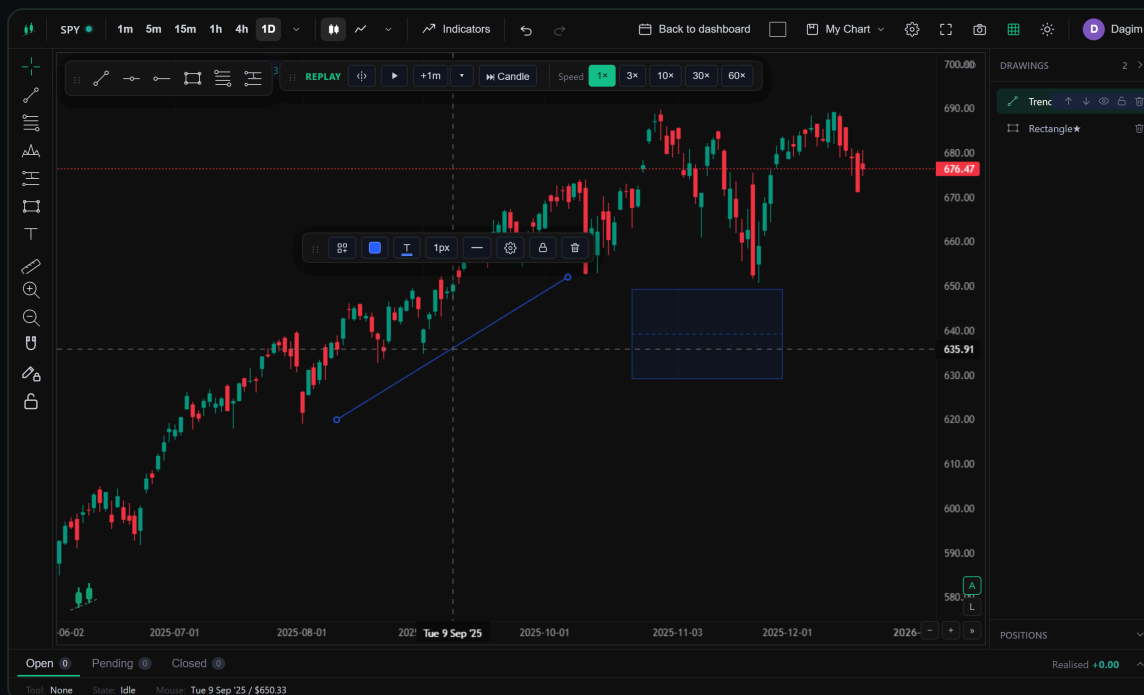

Keyboard shortcuts

<code>Ctrl</code> + <code>Z</code> / <code>Y</code>	Undo / redo a drawing change
<code>Esc</code>	Cancel the tool you are placing, close a menu or dialog
<code>Enter</code>	Finish a multi-point drawing (a path, a polyline)
<code>Delete</code>	Remove the selected drawings
<code>Shift</code> + click	Select several drawings at once
Mouse wheel / drag	Zoom / pan the chart. Drag the price axis to scale; double-click it to reset.

CHAPTER 05

Drawing tools

Pick a tool from the panel on the left and click on the chart to place its anchors. Drawings live in chart space: they survive zooming, panning and timeframe changes, and they belong to the session you drew them in.

A selected trend line with its floating toolbar: template, colour, text, line width, line style, settings, lock, delete. The Drawings panel on the right lists everything on the chart with reorder, show/hide, lock and delete.

The 68 tools, by group

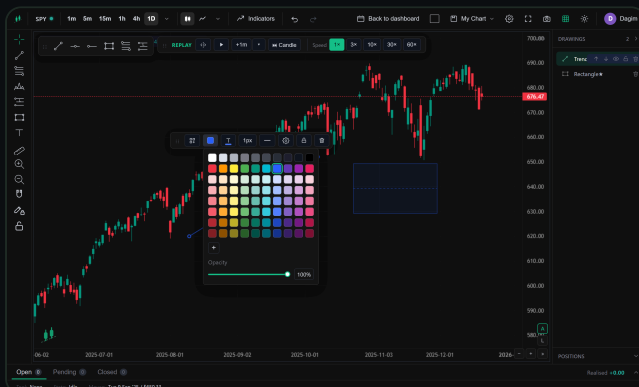

Lines	Trend line, ray, info line, extended line, trend angle, horizontal, vertical, cross line
Channels	Parallel channel, regression trend, flat top/bottom, disjoint channel
Pitchforks	Andrews, Schiff, modified Schiff, inside pitchfork
Fibonacci	Retracement, extension, channel, time zone, speed fan, time extension, circles, spiral, arcs, wedge, pitchfan
Gann	Gann box, fan, square, square fixed
Forecast & measure	Long position, short position, forecast, bars pattern, projection, price range, date range
Shapes	Rectangle, rotated rectangle, circle, ellipse, triangle, arc, path, polyline, curves
Annotations	Text, callout, note, price label, flag, pin, comment, signpost, table, brush, highlighter, arrows

Working with drawings

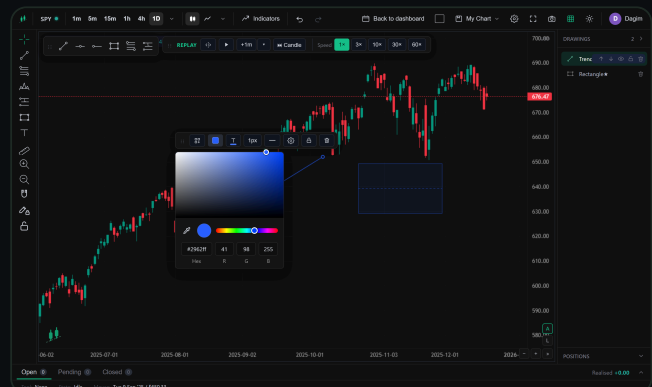

- **Select** by clicking; drag the body to move, drag a handle to reshape — anywhere on the chart, including the runway past the last candle.
- **Magnet** (the magnet icon in the panel) snaps anchors to the nearest open, high, low or close.
- **Keep drawing** lets you place the same tool repeatedly without re-selecting it. **Esc** puts the tool down.
- **Favourites** — star a tool to add it to the floating favourites bar at the top of the chart.
- **Lock** a drawing so a stray drag cannot move it; **hide** it from the Drawings panel without deleting it.
- **Fold the panel** — the chevron in the Drawings header folds the panel to a narrow strip showing only the count; click the strip to bring it back. The chart takes the freed width.
- **Templates** — the first toolbar button saves a drawing's look (colour, width, style) as a default for that tool.
- **Copy / paste** a drawing onto the same chart a few bars later; **undo / redo** every change.

Colours

The colour button opens a palette of greys, brights, tints and shades. The **+** opens the full picker — saturation square, hue bar, hex and RGB fields, and an eyedropper in browsers that support it. It looks the same on Windows, macOS and Linux. Opacity has its own slider.

The palette.

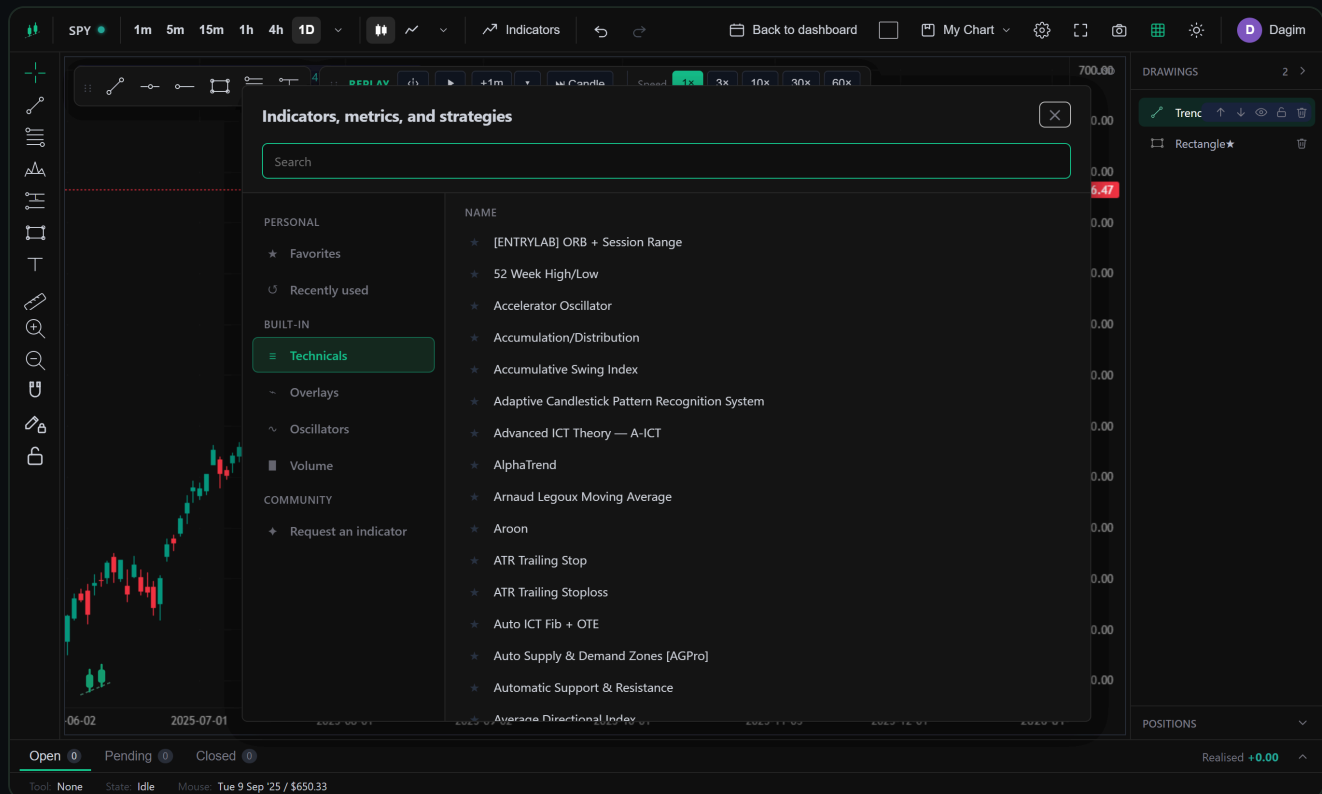

The full picker.

CHAPTER 06

Indicators

The **Indicators** button in the top bar opens the whole library. Add as many as you like on every plan — the heavy ones compute off the main thread, so stacking them does not slow the replay.

The indicator library. Search, then click to add. Added indicators appear in the legend at the top left of the chart; click the gear on a legend entry to configure it.

What is in the library

- **Classic studies** — moving averages, VWAP, volume and the usual oscillators.
- **ICT & smart-money suites** — market structure (BOS/CHoCH, internal and external structure, multi-timeframe structure), order blocks and breaker blocks, fair value gaps (including MTF and volume-profile FVGs), liquidity (buy-side/sell-side, sweeps, confluence), premium/discount zones, killzones and session ranges, the power of three, SMT divergences, Fibonacci OTE, and full "master suite" overlays.
- **Automatic levels** — support/resistance, supply/demand, trend lines, candlestick patterns, market-shift levels.
- **Higher-timeframe candles** drawn over your chart, so the 4h bar is visible while you work the 5m.

Every indicator has a settings dialog (the gear in the legend) with the same layout: inputs on the left, style on the right, and the colour picker on every swatch. **Remove all indicators** is one click on the chart's right-click menu.

CHAPTER 07

Trading in replay

Paper trades, placed against real history, filled by the replay as the market moves. Every order is recorded with the setup and the thinking you captured on the ticket, so the journal writes itself.

Place an order

- **From a position tool** — draw a Long position or Short position (Forecast & measure group), set entry, stop and target on the chart, then click the order button on its toolbar. Risk-to-reward is visible before you commit.
- **From the chart** — right-click at a price and choose **Add order at**
- **The ticket** asks for side, entry, stop, target and size — and optionally the setup name, confidence and your notes. Those go straight to the journal.

Positions panel

At the bottom of the chart: **Open**, **Pending** and **Closed** positions for this session, with the running result and **Realised P&L** on the right. Stops and targets are drawn on the chart as draggable levels; execution marks show where each fill happened.

The chevron on the panel's right end collapses it to its tab strip; drag its top edge to resize it. To take it off the screen entirely, tab strip included, use the **Positions** chevron at the foot of the Drawings panel — the chart gets the full height, and the same chevron brings the panel back.

The **P&L tracker** as a session unfolds.

Balance. Each session carries its own account balance, set when you create it. Realised P&L updates it as trades close; the balance badge in the top bar shows where you stand.

CHAPTER 08

Journal & Analytics

Journal

The **Journal** area lists every trade across every session: pair, side, entry and exit, result in money and in R, holding time, the setup and confidence you noted, and your comments. Edit a note later; filter by session, outcome or date; the **Trades** tab on the Backtesting dashboard shows the same list for quick reference.

The trading journal.

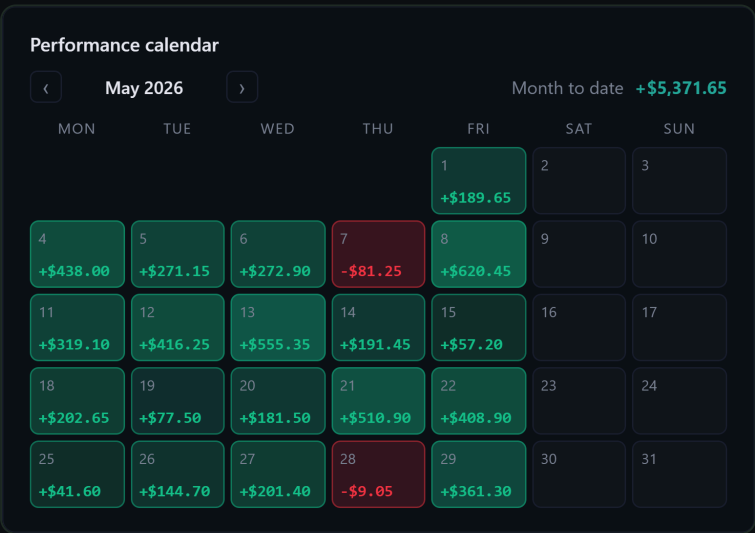

Analytics

The **Analytics** area turns the journal into a read on your edge:

- **Performance** — cumulative P&L, edge (expectancy, profit factor), extremes, risk, streaks, and the R-multiple distribution.
- **By symbol** and **by session** — where the results actually come from.
- **Time-based** — by day of week, by hour of day, by holding time. This is how people discover their strategy only works in one session of the day.
- **Performance calendar** — every day coloured by its result.

Performance analytics.

The performance calendar.

Analytics and the trial. The Analytics area is included in the 15-day and Monthly plans. On the free trial, your trades are recorded and waiting; the analysis unlocks the moment a plan is active.

CHAPTER 09

Your account

What is saved to your account

Your sessions and where you are in each, your trades and journal entries, your layouts and templates, and your drawings. Sign in on another machine, or clear this one, and it is all there. Price history itself is not stored with your account — it downloads again when you open a session.

Devices

An account is used from one place at a time on the free trial and the 15-day plan, and from two on Monthly. If you sign in somewhere new while a session is active elsewhere, the app tells you where you are signed in and asks whether to continue here — the other device is then signed out and told why. Closing a tab without signing out frees your account automatically after a few minutes.

Signing out, and "session ended"

- Your account menu is at the bottom of the dashboard sidebar: your name, your plan, and **Sign out**.
- Your sign-in lasts 30 days of use. If the app shows *"Your sign-in expired"* or *"Your session has ended"*, simply sign in again — your work is on your account.
- *"You were signed out because your account was used on another device"* means exactly that: the account was taken over from elsewhere. If that was not you, change your Google password and contact support.

Privacy

We keep your sign-in details, the app version you use, and your saved work. We do not sell any of it. Market data stays in your browser.

CHAPTER 10

Plans & pricing

There is no cut-down edition. Replay, the journal, every drawing tool and unlimited indicators are there from the free trial upward. Plans change how much you can hold open at once — sessions, history, devices — and whether Analytics is included.

FREE TRIAL

0

Birr

3 days · no card, no renewal

- ✓ 2 backtesting sessions to get you started
- ✓ Up to 6 months of history per session
- ✓ Unlimited indicators
 - One device at a time
- ✓ Full journal access
 - No Analytics

15 DAYS

499

MONTHLY

799

Birr

30 days · 26.6 Birr a day

- ✓ 8 backtesting sessions every month
- ✓ Up to 2 years of history per session
- ✓ Unlimited indicators
 - Two devices at a time
- ✓ Full journal access
- ✓ Full Analytics

How a plan period works

- Your plan runs from the day it is confirmed for its length — 15 or 30 days. Renewing before it ends extends it; buying after it lapsed starts a new period.
- The session allowance is per period: **4 sessions to create in your 15 days, 8 in your month.** Unused sessions do not carry over; a new period brings a fresh allowance.
- Plans stack. Buy another while one is running and both allowances pool; new sessions spend the plan ending soonest.
- A session outlives the plan it was created on: every session opens while any plan is running.
- Deleting a session never returns it to the allowance.

When your last plan ends. Every session locks together until a plan is active again, and every one opens again the moment it is. Nothing is deleted — sessions, trades, journal, layouts and drawings are waiting on your account.

CHAPTER 11

Paying with Telebirr

Plans are paid by Telebirr transfer. It takes about a minute, and your plan is active as soon as the transfer is confirmed.

- 1 Click your plan chip at the top right of the dashboard (or **See plans** anywhere it appears) and choose a plan.
- 2 The payment page shows the amount and the account to send it to, and issues a **payment reference** for this purchase — keep it; it identifies your payment if you ever contact support.
- 3 In Telebirr, send exactly the amount shown to:
Yordanos Simegnew · 0940323692
- 4 Copy the **transaction number** from your Telebirr confirmation SMS or receipt and paste it into the form.
- 5 Click **Confirm payment**. The app shows "confirming" while the transfer is checked; most payments are confirmed within minutes, and your plan starts the moment it is.

← All plans

Confirm payment Cancel

The payment page. Amount, recipient, your payment reference, and the field for your Telebirr transaction number.

If it takes longer. Send your payment reference and your Telebirr transaction number to support (chapter 14) and we will confirm it by hand. Never send money to any number other than the one shown in the app.

CHAPTER 12

Referral program

Share 11Charts and earn **10% of the first plan** every person you bring buys — paid to your Telebirr.

How it works

- 1 Open **Referrals** in the dashboard sidebar. Your personal link is there — copy it, or share it with the button.
- 2 When someone opens 11Charts through your link and signs in for the first time, they are attributed to you. Attribution is locked at that first sign-in and never moves.
- 3 When that person buys their first paid plan, **10% of what they paid** is credited to your balance. (Renewals do not pay again; it is a one-time commission per person.)
- 4 Your Referrals page shows your total earned, your withdrawable balance, and who signed up — with their plan, once they have one.

11Charts

Referrals

Version 2.0.0

The Referrals page: your link, your balance against the withdrawal minimum, and your referrals.

Getting paid

- Your balance becomes withdrawable at **1,000 Birr**. The page shows a progress bar until then.
- Once you are over the minimum, click **Request payout**, enter the **Telebirr number** the money should go to, and confirm. You can request a payout at any time your balance is above the minimum.
- The page shows the request as pending until it is paid. One request at a time; the next one can be made after it is settled.

Commission	10% of the referred person's first paid plan (49.9 Birr for 15 days, 79.9 Birr for Monthly)
Paid when	Their payment is confirmed
Withdrawal minimum	1,000 Birr
Paid to	The Telebirr number you enter with the request

Fair use. Referring yourself, or accounts that never intend to use the app, does not earn commission; we review payout requests before paying them.

CHAPTER 13

Troubleshooting & FAQ

"Your sign-in expired" / "Your session has ended"

Sign in again. Your work is on your account and will be there. If it happens repeatedly on one machine, check the date and time on that computer are correct.

The chart opened but shows no candles

Open Settings (the gear) and choose **Template** → **Default**, or go back to the dashboard and reopen the session. If the price scale had auto-fit switched off, the candles were drawn off-screen; the app now fits the scale whenever a session opens.

A session takes a long time to open

The opening screen downloads one month of minute data at a time; a year is twelve downloads, two years twenty-four. A slow or unstable connection is the usual cause. The download retries dropped chunks by itself; if it does stop, reopen the session — everything already downloaded is kept and it resumes where it left off.

"XAUUSD has data from ... to ..."

The dates you picked fall outside what our archive holds for that pair. Pick dates inside the range shown under the date fields.

The end date jumps back when I pick it

Your plan caps how long a session may be (6 months, 1 year or 2 years). The form pulls the end date back to the cap and tells you so. Shorten the range, or upgrade.

I cannot create another session

You have used every session on your running plans. Deleting a session does not free one; adding a plan brings more.

My sessions show a lock

You have no plan running. Your sessions are kept, and all of them open again as soon as a plan is active.

The colour picker looks different from before

11Charts now draws its own picker, the same on every operating system, instead of the system dialog. The + in the palette opens it.

Drawings from one session appear in another

They do not any more — drawings are saved per session. If you see this, reload the app once.

Can I use my own data?

Yes: the chart accepts CSV import for your own history, from the chart's right-click menu.

Is my work safe if I clear my browser?

Yes. Sessions, trades, journal, layouts and drawings are backed up to your account and come back on sign-in.

CHAPTER 14

Support

A person answers. Include your payment reference for anything about a payment, and the pair and dates for anything about a session.
